

Timothy Stevens | Seller

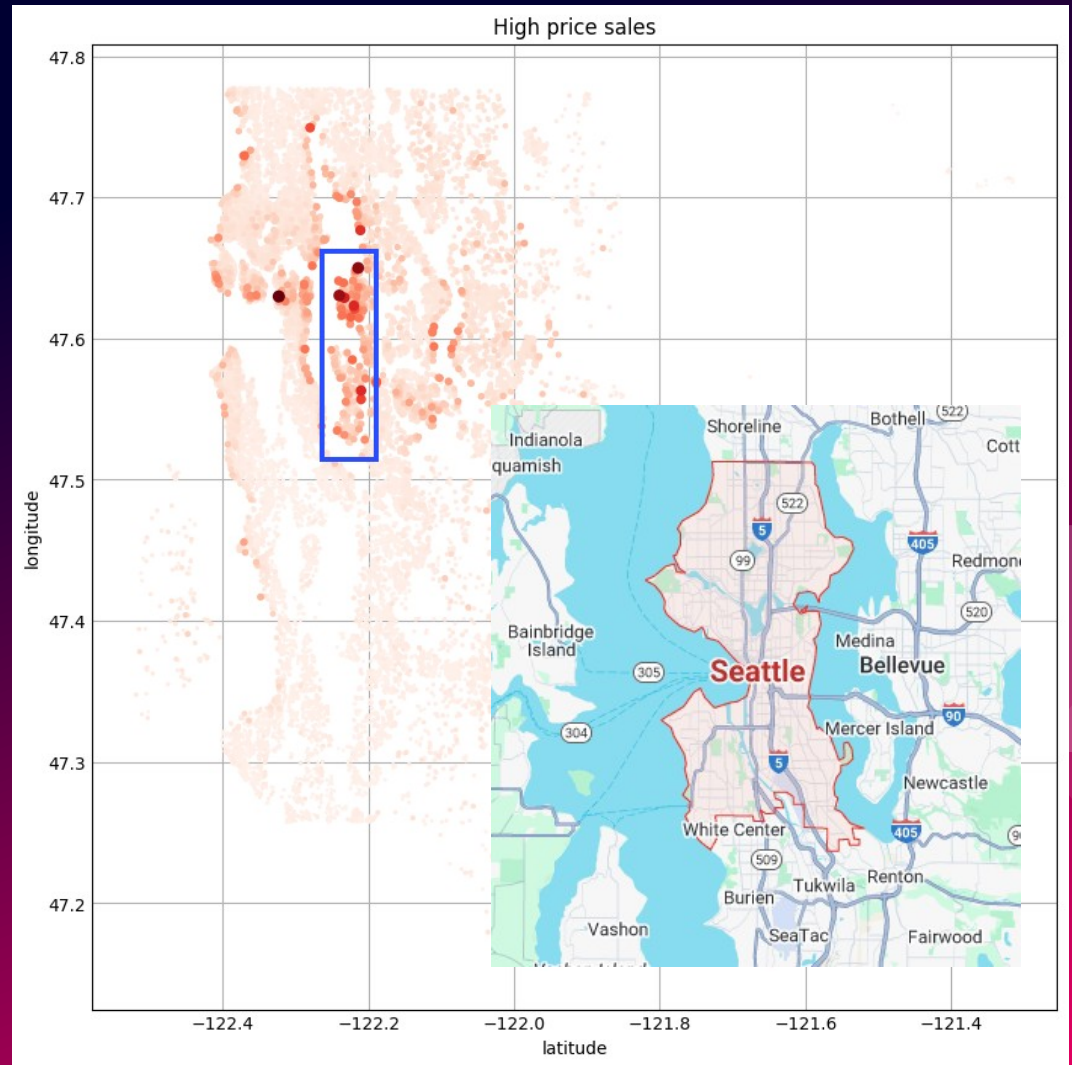

Owens expensive houses in the center,
needs to get rid,
best timing within a year,
open for renovation when profits raise

Center of Seattle

Visualization of estate sales marked by price.

City center contains most of the high price sales.

Blue marking as selection for sales in city center.

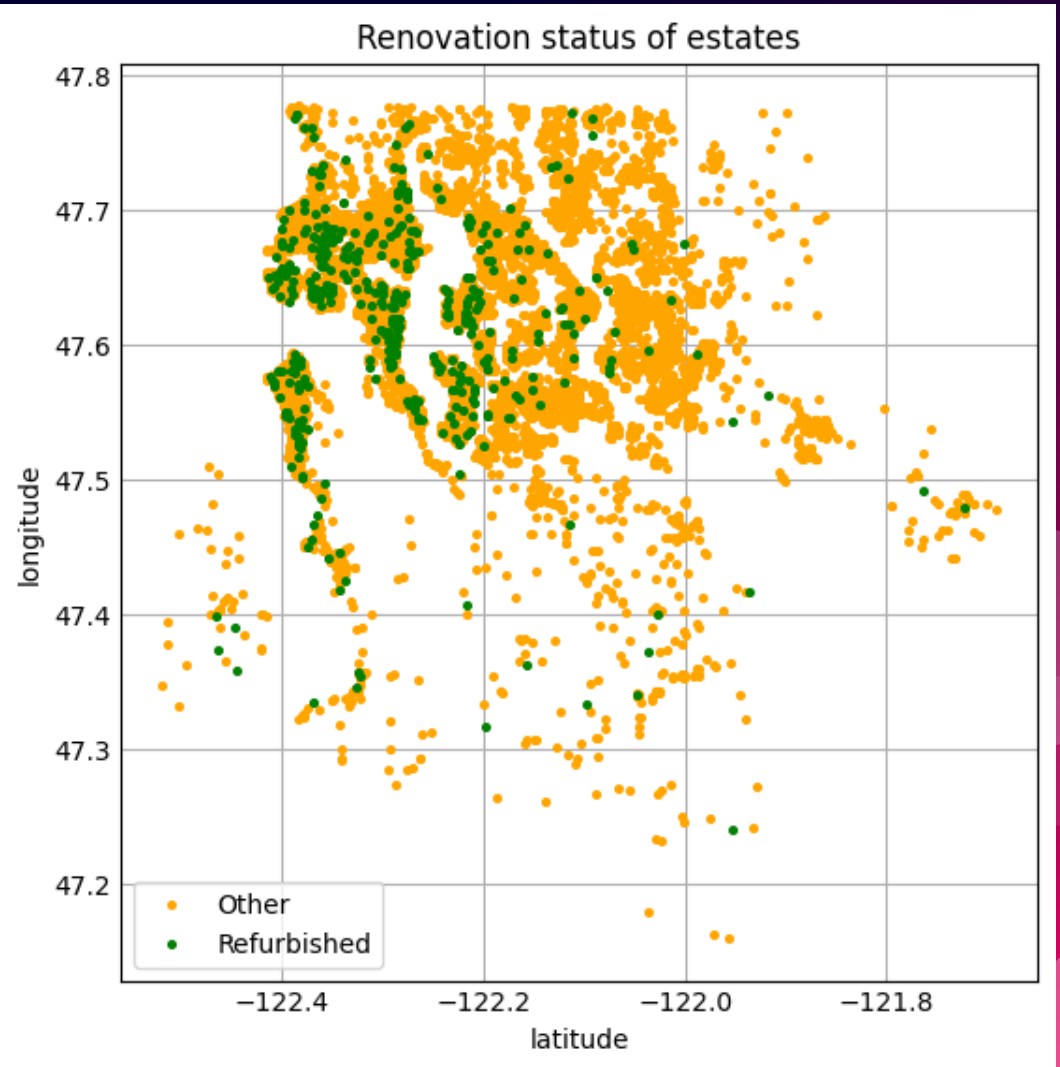

Renovation status

Green: Renovated (minority)
Orange: Other

Renovation was done mainly
in the west part of the city.

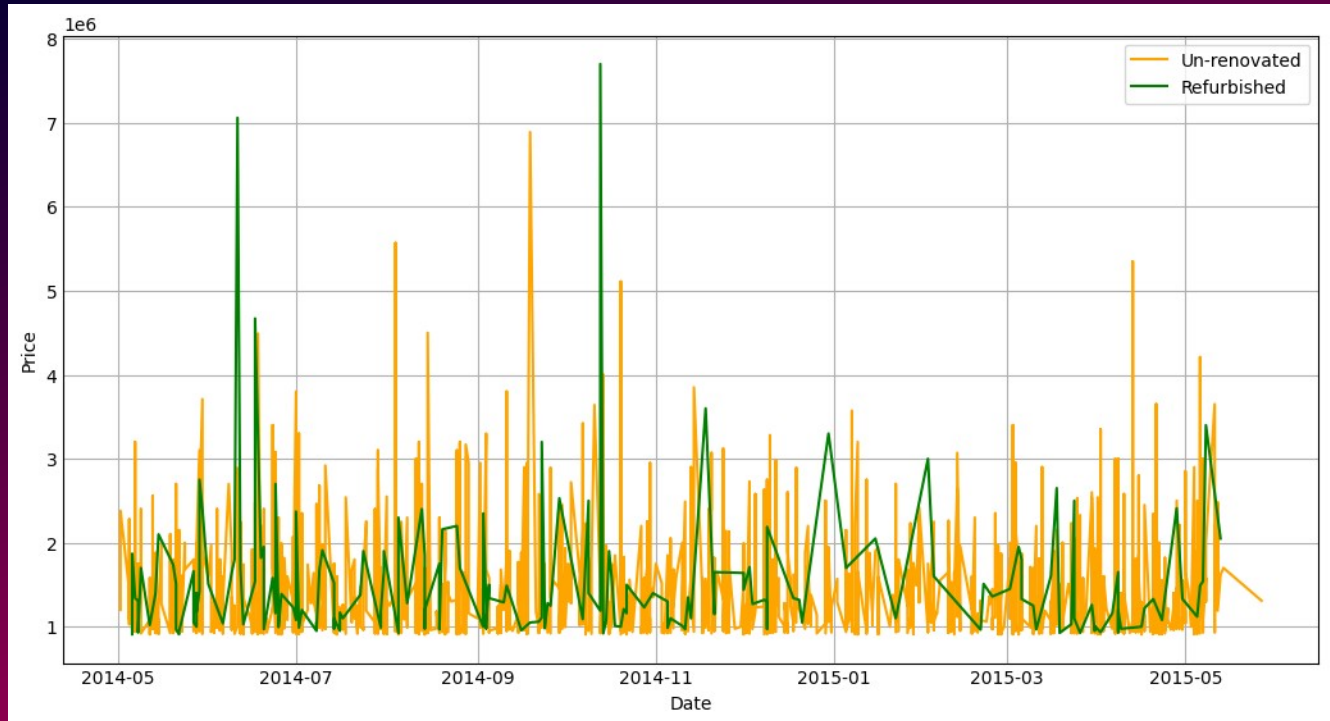

East has most sales without
renovation.

Sales in upper price range (top 26%)

Throughout the city top prices have been possible for any renovation status.

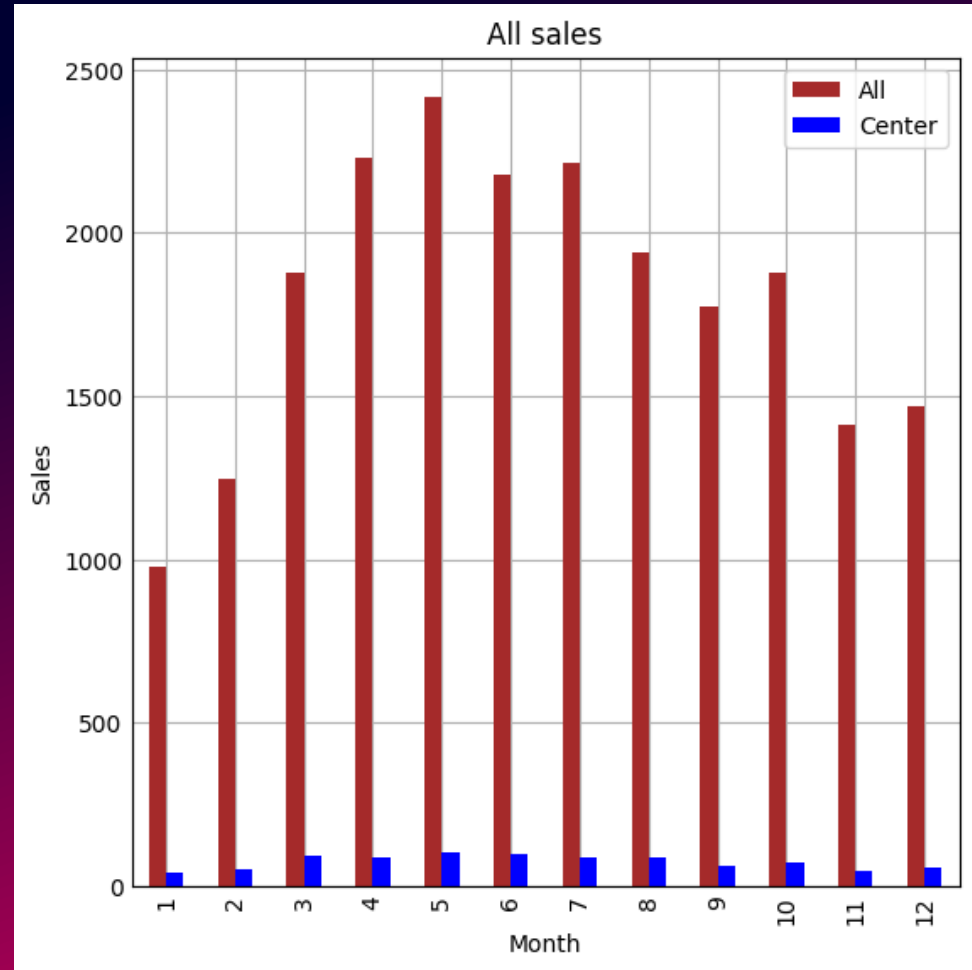

Average price of refurbished estates stayed often behind!

Sales amount

The whole city data does not provide enough significance for the given use case.
(Insight 1)

A more representative selection of sales in the city center was needed.

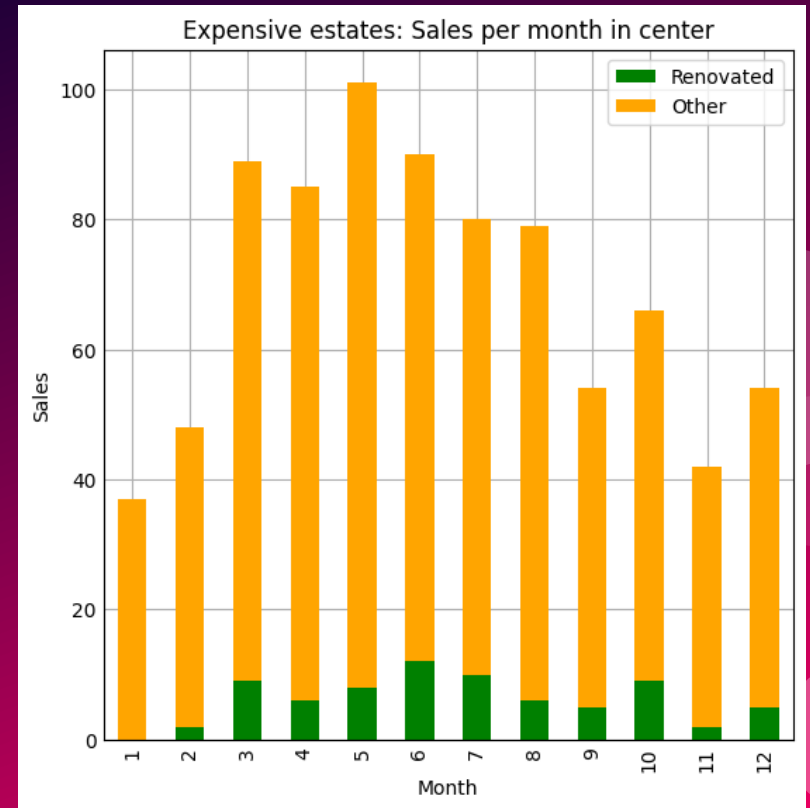

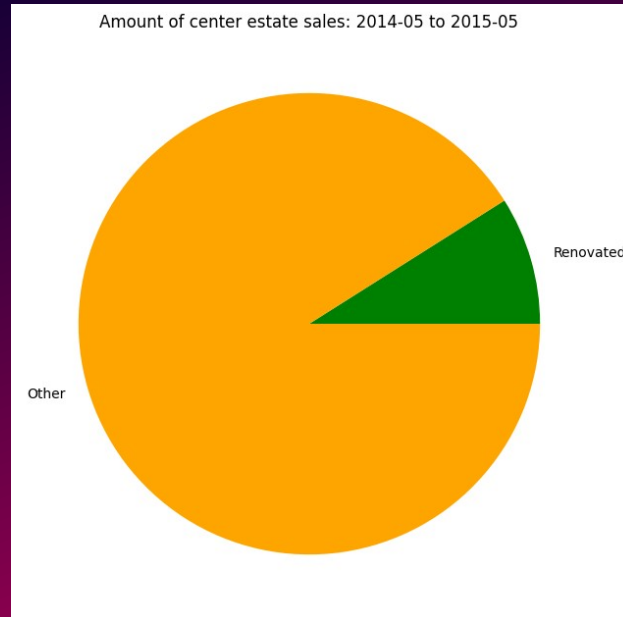

City center sales per month

Most sales in March to August.

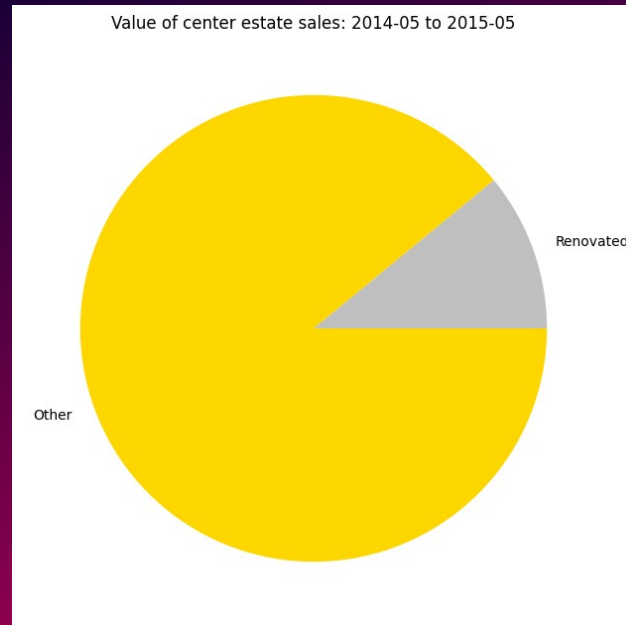

Peak in Mai! (Insight 2)

Sales of renovated play only a small role.

City center volume per month

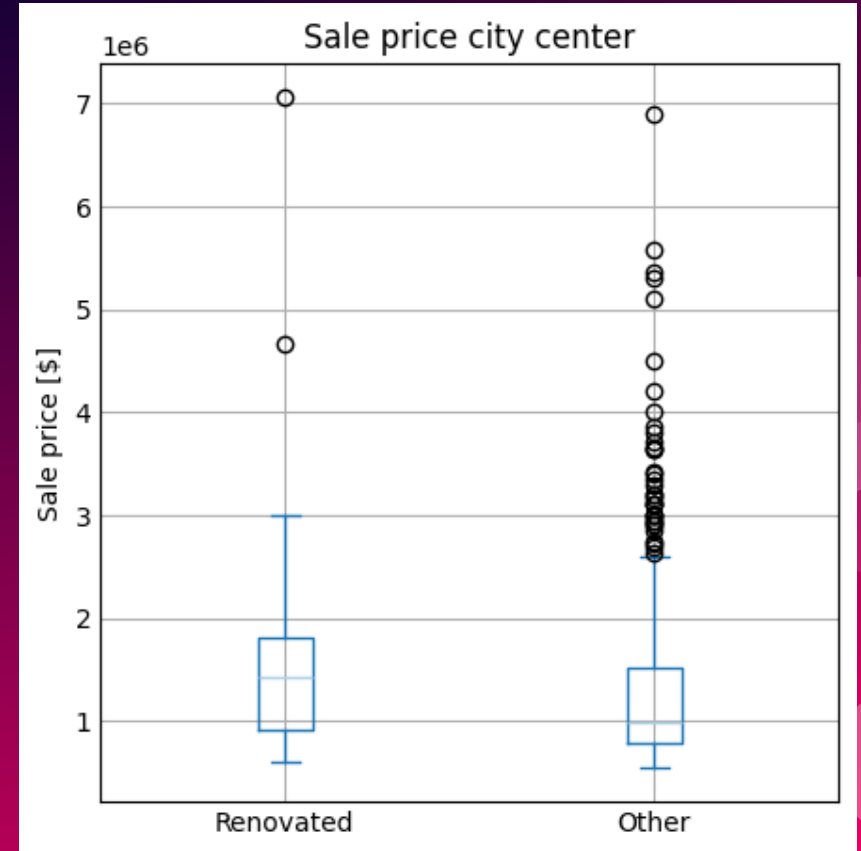

Highest sale volume in March to August.
Peak in Mai!
Volume of renovated object play only a small role.

Sale price distribution in city center

Renovated object achieve generally higher prices.

Not renovated estates achieve often competitive prices above renovated objects in the range of 2.5 to 5.5mill \$ (Insight 3)

Reminder:

Timothy Stevens | Seller

Expensive houses in the center

When can he sell fast?

Renovation only, if higher sale price!

Recommendation

- 1) If the apartments are in price range of **2.5 to 5.5mill \$** the market supports sales **not-renovated**.
- 2) Due to the **low volume** of renovated apartments a **quick sell** might be better supported by **not-renovated** offers. Even though it might boost the sale price of objects <2.5mill \$.
- 3) Best months to sell are **March to August. (Top Mai)**
